### **Acknowledgements**

This study corresponds to the initial phase of the first author's doctoral research, which focused on evaluating the psychometric properties of the instruments, and on adapting the Consideration of Future Consequences (CFC) scale into both abbreviated and domain-specific versions. The doctoral project is carried out under a co-tutelle agreement between the University of the Republic, Uruguay (Universidad de la República, Uruguay) and the Complutense University of Madrid, Spain (Universidad Complutense de Madrid, España).

The authors gratefully acknowledge the financial support provided by the Academic Postgraduate Commission (Comisión de Posgrado Académico) of the University of the Republic, Uruguay, through a doctoral scholarship awarded to the first author.

We also extend our sincere appreciation to all participants for their valuable time and commitment to this research.

Finally, we thank Eurecat – Technology Centre of Catalonia (Eurecat, Centre Tecnològic de Catalunya) for supporting the first author's participation in the 16th European Conference on Psychological Assessment (ECPA 2025).
